

# Linde Clean Hydrogen Think Hydrogen. Think Linde

Cheryl CHAN

Head, APAC Clean Hydrogen, Linde

---

Clean Hydrogen is gaining momentum and one of the fastest growing segment in the energy market globally. While the awareness and importance of energy transition from grey to green hydrogen is increasing, this trend of conversion to green hydrogen will be influenced by Government regulations and type of natural resources available in the region. The potential for hydrogen is immense both environmentally and across various end markets.

Linde being a global leader in hydrogen, has the largest liquid hydrogen capacity and distribution system in the world and has installed over 180 hydrogen refueling stations worldwide for cars, buses, trucks, and trains. Linde operates 80 hydrogen electrolysis plants and the world's first high purity hydrogen storage cavern. As a full-service supplier of gases, Linde continues to invest in clean hydrogen towards a low carbon future and focuses on long term sustainability development with our customers in a range of industries.
